Notice of Allowability

1. The following is an examiner's statement of reasons for allowance:

This is intended to clarify the reasons for allowance included in the Office Action of 11 June 2007, which cited Bell and Nagai as the closest prior art, with no further explanation.

Bell lacks the instant step of "generating a first portion of the power from the absorption of the radiation . . .", since Bell teaches thermoelectric generation exclusively. Therefore, although Bell teaches a device having a rotatable joint similar to that instantly claimed, it does not meet the limitations of instant claim 13.

Nagai teaches a device (Figure 5) in which photovoltaic generation takes place on photoacceptor units on fan rotor 19 (Column 13, lines 7-28), and thermoelectric generation is driven by a gradient between high-temperature part 7a and low temperature part 7b. (Column 13, lines 28-43) However, it appears that only part 7b is present on the fan rotor, so the instant limitations to first and second elements being present on the second rotatable element are not met by Nagai, nor does it appear that modification of the device to meet this limitation would be possible, let alone obvious. In addition, the source of heat used by Nagai (i.e. source of radiation 1) is external to the device of Nagai, and cannot be said to be present on a first rotatable element as claimed. (i.e. part of a "rotatable joint having first and second rotatable elements") For at least these reasons, the claims are considered to be patentably distinguished from the prior art of record.
